<sup>1</sup> Formal verification and analysis of multimedia systems

window

Sérgio Campos, Berthier Ribeiro-Neto, Autran Macedo, Luciano Bertini October 1999 Proceedings of the seventh ACM international conference on Multimedia (Part 1)

Full text available: pdf(1.35 MB)

Additional Information: full citation, abstract, references, index terms

Multimedia systems such as video-on-demand (VOD) servers are time critical systems. These systems have strict response times, which implies that a delayed response can have serious consequence. For instance, in the case of a VOD server, an immediate consequence of a delayed response time can be user dissatisfaction, what can ultimately lead to the end of a business based on this system. Therefore, analysis and verification of timing properties of multimedia systems is an important problem. ...

<sup>2</sup> <u>Automated Correctness Condition Generation for Formal Verification of Synthesized</u> RTL Designs

Nazanin Mansouri, Ranga Vemuri

January 2000 Formal Methods in System Design, Volume 16 Issue 1

Full text available: Publisher Site

Additional Information: full citation, abstract; references, index terms

High-level synthesis tools generate register-transfer level designs from algorithmic behavioral specifications. The high-level synthesis process typically consists of dependency graph scheduling, functional unit allocation, register allocation, interconnect allocation and controller generation tasks. Widely used algorithms for these tasks retain the overall control flow structure of the behavioral specification allowing code motion only within basic blocks. Further, high-level synthesi ...

1 WALRUS: a similarity retrieval algorithm for image databases

window

Apostol Natsev, Rajeev Rastogi, Kyuseok Shim

June 1999 ACM SIGMOD Record, Proceedings of the 1999 ACM SIGMOD international conference on Management of data, Volume 28 Issue 2

Full text available: pdf(1.63 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

Traditional approaches for content-based image querying typically compute a single signature for each image based on color histograms, texture, wavelet tranforms etc., and return as the query result, images whose signatures are closest to the signature of the query image. Therefore, most traditional methods break down when images contain similar objects that are scaled differently or at different locations, or only certain regions of the image match. In this pape ...

<sup>2</sup> Matching and indexing sequences of different lengths

Tolga Bozkaya, Nasser Yazdani, Meral Özsoyoğlu

3 <u>Data integration using similarity joins and a word-based information representation language</u>

William W. Cohen

July 2000 ACM Transactions on Information Systems (TOIS), Volume 18 Issue 3

Full text available: pdf(312.80 KB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>, <u>review</u>

The integration of distributed, heterogeneous databases, such as those available on the World Wide Web, poses many problems. Herer we consider the problem of integrating data from sources that lack common object identifiers. A solution to this problem is proposed for databases that contain informal, natural-language "names" for objects; most Web-based databases satisfy this requirement, since they usually present their information to the enduser through a veneer of text. We des ...

Similarity-based retrieval for diverse bookshelf software repository users

Igor Jurisica

November 1997 Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research

Full text available: Topdf(126.60 KB) Additional Information: full citation, abstract, references, index terms

The paper presents a similarity-based retrieval framework for a software repository that aids the process of maintaining, understanding, and migrating legacy software systems [12]. Designing a software repository involves three issues: (1) information content; (2) information representation; and (3) strategies for accessing repository artifacts. Assuming the architecture presented in [12] we extend the retrieval system to support imprecise queries, iterative browsing, and diverse users. Because o ...

## <sup>5</sup> A multi-similarity algebra

S. Adali, P. Bonatti, M. L. Sapino, V. S. Subrahmanian

June 1998 ACM SIGMOD Record, Proceedings of the 1998 ACM SIGMOD international conference on Management of data, Volume 27 Issue 2

Full text available: pdf(1.81 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

The need to automatically extract and classify the contents of multimedia data archives such as images, video, and text documents has led to significant work on similarity based retrieval of data. To date, most work in this area has focused on the creation of index structures for similarity based retrieval. There is very little work on developing formalisms for querying multimedia databases that support similarity based computations and optimizing such queries, even though it is well known ...

## 6 Similarity-based algebra for multimedia database systems

Solomon Atnafu, Lionel Brunie, Harald Kosch

January 2001 Proceedings of the 12th Australasian conference on Database technologies ADC '01

Full text available: pdf(912.09 KB)

pdf(912.09 KB)
Publisher Site

Additional Information: full citation, abstract, references, index terms

In database management systems, the need to integrate content-based image retrieval facilities has become one of the key issues. In this paper, we first illustrate the importance of such facilities with example queries and give an overview of the works done in similarity-based data retrieval. Then, we propose an image repository model that supports similarity-based operations on feature vector representations of images. Moreover, we introduce a new similarity-based algebra on image tables. Thus, ...

#### 7 Similarity-based queries for time series data

Davood Rafiei, Alberto Mendelzon

June 1997 ACM SIGMOD Record, Proceedings of the 1997 ACM SIGMOD international conference on Management of data, Volume 26 Issue 2

Full text available: Ddf(1.17 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

We study a set of linear transformations on the Fourier series representation of a sequence that can be used as the basis for similarity queries on time-series data. We show that our set of transformations is rich enough to formulate operations such as moving average and time warping. We present a query processing algorithm that uses the underlying R-tree index of a multidimensional data set to answer similarity queries efficiently. Our experiments show that the performance of this algorith ...

# <sup>8</sup> Fast detection of communication patterns in distributed executions

Thomas Kunz, Michiel F. H. Seuren

November 1997 Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research

Full text available: pdf(4.21 MB)

Additional Information: full citation, abstract, references, index terms

Understanding distributed applications is a tedious and difficult task. Visualizations based on process-time diagrams are often used to obtain a better understanding of the execution of

the application. The visualization tool we use is Poet, an event tracer developed at the University of Waterloo. However, these diagrams are often very complex and do not provide the user with the desired overview of the application. In our experience, such tools display repeated occurrences of non-trivial commun ...

10 Giving meanings to WWW images

Heng Tao Shen, Beng Chin Ooi, Kian-Lee Tan

October 2000 Proceedings of the eighth ACM international conference on Multimedia

Full text available: pdf(872.87 KB) Additional Information: full citation, abstract, references, citings

Images are increasingly being embedded in HTML documents on the WWW. Such documents over the WWW essentially provides a rich source of image collection from which user can query. Interestingly, the semantics of these images are typically described by their surrounding text. Unfortunately, most WWW image search engines fail to exploit these image semantics and give rise to poor recall and precision performance. In this paper, we propose a novel image representation model called Weigh ...

<sup>11</sup> A tree algorithm for nearest neighbor searching in document retrieval systems Caroline M. Eastman, Stephen F. Weiss

May 1978 ACM SIGIR Forum, Proceedings of the 1st annual international ACM SIGIR conference on Information storage and retrieval, Volume 13 Issue 1

Full text available: pdf(651.08 KB)

Additional Information: full citation, abstract, references, citings, index

The problem of finding nearest neighbors to a query in a document collection is a special case of associative retrieval, in which searches are performed using more than one key. A nearest neighbors associative retrieval algorithm, suitable for document retrieval using similarity matching, is described. The basic structure used is a binary tree, at each node a set of keys (concepts) is tested to select the most promising branch. Backtracking to initially rejected branches is allowed and ofte ...

12 SamMatch: a flexible and efficient sampling-based image retrieval technique for large image databases

Kien A. Hua, Khanh Vu, Jung-Hwan Oh

October 1999 Proceedings of the seventh ACM international conference on Multimedia (Part 1)

Full text available: pdf(1.70 MB)

Additional Information: full citation, abstract, references, citings, index terms

The rapid growth of digital image data increases the need for efficient and effective image retrieval systems. Such systems should provide functionality that tailors to the user's need at the query time. In this paper, we propose a new image retrieval technique that allows users to control the relevantness of the results. For each image, the color contents of its regions are captured and used to compute similarity. Various factors, assigned automatically or by the user, allow high recall an ...

13 <u>Scalable integrated region-based image retrieval using IRM and statistical clustering</u>
James Z. Wang, Yanping Du

January 2001 Proceedings of the 1st ACM/IEEE-CS joint conference on Digital libraries

Full text available: pdf(1.73 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>

Statistical clustering is critical in designing scalable image retriev al systems. In this paper, we present a scalable algorithm for indexing and retrieving images based on region segmentation. The method uses statistical clustering on region features and IRM (Integrated Region Matching), a measure developed to evaluate overall similarity between images that incorporates properties of all the regions in the images by a region-matching scheme. Compared with retrieval based on individual ...

14 Papers: Inherited Feature-based Similarity Measure based on large semantic hierarchy and large text corpus

August 1996 Proceedings of the 16th conference on Computational linguistics - Volume

Full text available: pdf(623.25 KB) Additional Information: full citation, abstract, references, citings

We describe a similarity calculation model called IFSM (Inherited Feature Similarity Measure) between objects (words/concepts) based on their common and distinctive features. We propose an implementation method for obtaining features based on abstracted triples extracted from a large text corpus utilizing taxonomical knowledge. This model represents an integration of traditional methods, i.e., relation based similarity measure and distribution based similarity measure. An experiment, using our n ...

15 Content-based retrieval of segmented images

T.-S. Chua, S.-K. Lim, H.-K. Pung

October 1994 Proceedings of the second ACM international conference on Multimedia

Full text available: pdf(846.03 KB)

Additional Information: full citation, abstract, references, citings, index terms

Most general content-based image retrieval techniques use colour and texture as main retrieval indices. A recent technique uses colour pairs to model distinct object boundaries for retrieval. These techniques have been applied to overall image contents without taking into account the characteristics of individual objects. While the techniques work well for the retrieval of images with similar overall contents (including backgrounds), their accuracies are limited because they are unable to t ...

16 Concepts and effectiveness of the cover-coefficient-based clustering methodology for text databases

Fazli Can, Esen A. Ozkarahan

December 1990 ACM Transactions on Database Systems (TODS), Volume 15 Issue 4

Full text available: pdf(2.74 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

A new algorithm for document clustering is introduced. The base concept of the algorithm, the cover coefficient (CC) concept, provides a means of estimating the number of clusters

within a document database and related indexing and clustering analytically. The CC concept is used also to identify the cluster seeds and to form clusters with these seeds. It is shown that the complexity of the clustering process is very low. The retrieval experiments show that the information-retrieval effectiv ...

# 18 VAGUE: a user interface to relational databases that permits vague queries Amihai Motro

July 1988 ACM Transactions on Information Systems (TOIS), Volume 6 Issue 3

Full text available: pdf(2.16 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>, <u>review</u>

A specific query establishes a rigid qualification and is concerned only with data that match it precisely. A vague query establishes a target qualification and is concerned also with data that are close to this target. Most conventional database systems cannot handle vague queries directly, forcing their users to retry specific queries repeatedly with minor modifications until they match data that are satisfactory. This article describes a system called VAGUE that can handle vague queries ...

# 19 Temporal sequence learning and data reduction for anomaly detection

Terran Lane, Carla E. Brodley

August 1999 ACM Transactions on Information and System Security (TISSEC), Volume 2 Issue 3

Full text available: pdf(628.31 KB)

The anomaly-detection problem can be formulated as one of learning to characterize the behaviors of an individual, system, or network in terms of temporal sequences of discrete data. We present an approach on the basis of instance-based learning (IBL) techniques. To cast the anomaly-detection task in an IBL framework, we employ an approach that transforms temporal sequences of discrete, unordered observations into a metric space via a similarity measure that encodes intra-attribute depende ...

next

Traditional approaches for content-based image querying typically compute a single signature for each image based on color histograms, texture, wavelet tranforms etc., and return as the query result, images whose signatures are closest to the signature of the query image. Therefore, most traditional methods break down when images contain similar objects that are scaled differently or at different locations, or only certain regions of the image match. In this pape ...

The integration of distributed, heterogeneous databases, such as those available on the World Wide Web, poses many problems. Herer we consider the problem of integrating data from sources that lack common object identifiers. A solution to this problem is proposed for databases that contain informal, natural-language "names" for objects; most Web-based databases satisfy this requirement, since they usually present their information to the enduser through a veneer of text. We des ...

Similarity-based retrieval for diverse bookshelf software repository users Igor Jurisica

November 1997 Proceedings of the 1997 conference of the Centre for Advanced Studies on Collaborative research

Full text available: The pdf(126.60 KB) Additional Information: full citation, abstract, references, index terms

The paper presents a similarity-based retrieval framework for a software repository that aids the process of maintaining, understanding, and migrating legacy software systems [12]. Designing a software repository involves three issues: (1) information content; (2) information representation; and (3) strategies for accessing repository artifacts. Assuming the architecture presented in [12] we extend the retrieval system to support imprecise queries, iterative browsing, and diverse users. Because o ...

# <sup>5</sup> A multi-similarity algebra

S. Adali, P. Bonatti, M. L. Sapino, V. S. Subrahmanian

June 1998 ACM SIGMOD Record, Proceedings of the 1998 ACM SIGMOD international conference on Management of data, Volume 27 Issue 2

Full text available: pdf(1.81 MB)

Additional Information: full citation, abstract, references, citings, index terms

The need to automatically extract and classify the contents of multimedia data archives such as images, video, and text documents has led to significant work on similarity based retrieval of data. To date, most work in this area has focused on the creation of index structures for similarity based retrieval. There is very little work on developing formalisms for querying multimedia databases that support similarity based computations and optimizing such queries, even though it is well known ...

## 6 Similarity-based algebra for multimedia database systems

Additional Information: full citation, abstract, references, index terms

In database management systems, the need to integrate content-based image retrieval facilities has become one of the key issues. In this paper, we first illustrate the importance of such facilities with example queries and give an overview of the works done in similaritybased data retrieval. Then, we propose an image repository model that supports similaritybased operations on feature vector representations of images. Moreover, we introduce a new similarity-based algebra on image tables. Thus, ...
